

4D SYSTEMS

TURNING TECHNOLOGY INTO ART

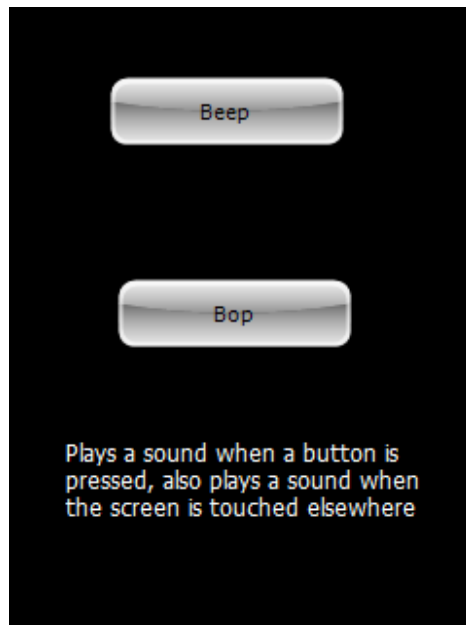

ViSi-Genie Magic Beep Bop

Document Date: 15th May 2015

Document Revision: 1.01

Description

This application note primarily shows how Magic Touch and Magic Release are used to implement a ViSi-Genie project that allows to play different sounds when touching different objects in the display. The Magic Touch and Magic Release objects are under the Genie Magic pane in Workshop 4 Pro. They contains a 4DGL code and they can be used when the detection of touch in an application is needed.

Note 1:The ViSi-Genie project for this application note is the demo “**BeepBop**”, which is found in Workshop. Go to the File menu -> Samples -> ViSi Genie Magic (Picaso/Diablo16) ->**BeepBop.4DGenie**.

Note 2:Workshop Pro is needed for this application.

Before getting started, the following are required:

- Any of the following 4D Picaso **touch** display modules:

[uLCD-24PTU](#)

[uLCD-32PTU](#)

[uLCD-43\(PT/PCT\)](#)

[uLCD-28PTU](#)

[uLCD-32WPTU](#)

and other superseded modules which support the ViSi Genie environment

- The target module can also be a Diablo16 **touch** display

[uLCD-35DT](#)

[uLCD-70DT](#)

[uLCD-43DT](#)

[uLCD-43DCT](#)

Visit www.4dsystems.com.au/products to see the latest display module products that use the Diablo16 processor.

- [4D Programming Cable](#) or [uUSB-PA5](#)
- [micro-SD \(uSD\)](#) memory card
- [Workshop 4 IDE](#) with Pro License (installed according to the installation document)
- When downloading an application note, a list of recommended application notes is shown. It is assumed that the user has read or has a working knowledge of the topics presented in these recommended application notes.

Application Overview

In the past it was not possible to detect touch pressed or released in ViSi Genie and also to be able to control a sound object and detect it's status if playing or not. The application shown in this document checks if a sound is not playing. If there is no sound playing then it will check what button is touched and then plays the corresponding sound. Three sounds are used here, first one is when 'BEEP' button is pressed, second one is when 'BOP' button is pressed and lastly when anywhere on the screen is pressed besides the buttons. If the touch is released then the sound will stop playing.

Setup Procedure

For instructions on how to launch Workshop 4, how to open a ViSi-Genie project, and how to change the target display, kindly refer to the section “**Setup Procedure**” of the application note:

[ViSi Genie Getting Started – First Project for Picaso Displays](#) (for Picaso)

or

[ViSi Genie Getting Started – First Project for Diablo16 Displays](#) (for Diablo16).

Create a New Project

Create a New Project

For instructions on how to create a new ViSi-Genie project, please refer to the section “**Create a New Project**” of the application note

[ViSi Genie Getting Started – First Project for Picaso Displays](#) (for Picaso)

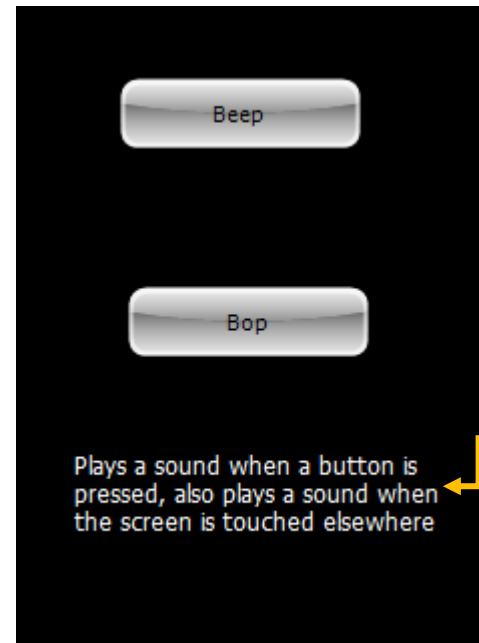

or

[ViSi Genie Getting Started – First Project for Diablo16 Displays](#) (for Diablo16).

Design the Project

Add Static Text Objects

A static text object is added to Form0. This is **Statictext0**.

Object Inspector	
Form	Form0
Object	Statictext0
Properties	
Property	Value
Name	Statictext0
Alias	Statictext0
AutoSize	Yes
Caption	Plays a sound when a button
Color	BLACK
Font	(WHITE, [], Tahoma, 9, [])
Height	42
Left	29
Top	222
Transparent	Yes
Width	186
WordWrap	Yes

To know more about static text objects, their properties, and how they are added to a project, refer to the application note [ViSi-Genie Labels, Text, and Strings](#)

Add Two Fancy Buttons

Two fancy button objects are added to Form 0. These are **Winbutton0** and **Winbutton1**.

Winbutton0

Form

Object

Properties Events

Property	Value
Name	Winbutton0
Alias	Winbutton0

Object Inspector

Form

Object

Properties Events

Event	Handler
OnChanged	<input type="text" value="..."/>

Plays a sound when a button is pressed, also plays a sound when the screen is touched elsewhere

Winbutton1

Form

Object

Properties Events

Property	Value
Name	Winbutton1
Alias	Winbutton1

Form

Object

Properties Events

Event	Handler
OnChanged	<input type="text" value="..."/>

Plays a sound when a button is pressed, also plays a sound when the screen is touched elsewhere

Both Winbutton0 and Winbutton1 have their OnChanged Event set to NONE.

To know more about Winbuttons, their properties, and how they are added to a project, refer to the application note [ViSi-Genie Advanced Buttons](#)

Add Sound Object

A sound object is added to Form0. This is **Sounds0**.

#	File	Properties	Channels	Audio rate	Byte rate	Bytes/Sample	Bits/Sample
1	beep-01a.wav	Standard Canonical PCM	1	44100	88200	2	16
2	button-7.wav	Standard Canonical PCM	1	44100	88200	2	16
3	button-2.wav	Standard Canonical PCM	1	44100	88200	2	16

The sound Object contains 3 WAV files. As shown in the image above. How the wav files will be played will be explained later on.

To know more about Sound Object, it's properties, and how it is added to a project, refer to the application note [ViSi-Genie Play Sound](#)

Add Magic Touch Object

A Magic Touch Object is added to Form0. This is **MagicTouch**.

Property	Value
Name	MagicTouch
Alias	MagicTouch
Code	MagicTouch.inc

Event	Handler

A Magic Touch object contains a 4DGL routine that is executed the moment that a "TOUCH_PRESSED" action is detected on the display.

```

8   if (! snd_Playing())
9       if (ImageTouched == iWinbutton0)
10          file_PlayWAV(iSounds[0]) ;
11      else if (ImageTouched == iWinbutton1)
12          file_PlayWAV(iSounds[1]) ;
13      else
14          file_PlayWAV(iSounds[2]) ;
15      endif
16  endif

```

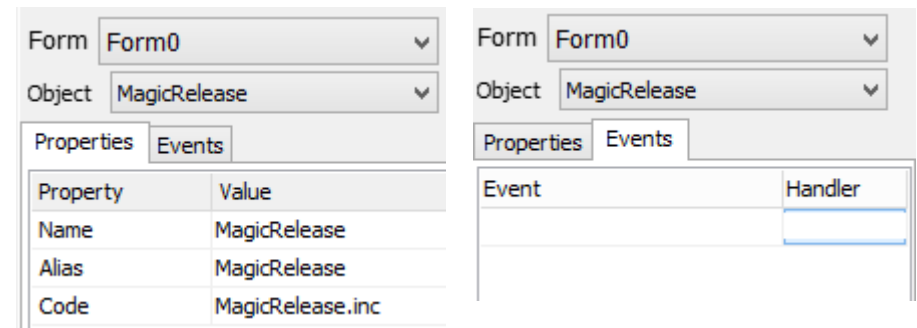

The code shown above is the content of the MagicTouch.inc. The function 'snd_Playing()' is used to check if the sound object is playing or not. It returns 0 if sound has finished playing, else returns number of 512 byte blocks to go. If sound is not playing then proceed to touch detection.

The variable 'ImageTouched' is the object currently being touched. It is compared to values such as iWinbutton0 to determine the object for which a touch has just been detected. If Winbutton0 is touched then the sound object will play the first wav file 'beep-01a.wav'. If Winbutton1 is touched then the sound object will play the second wav file 'button-7.wav'. Else if neither Winbutton0 nor Winbutton1 is pressed but the display is still touched then the program will play 'button-2.wav'.

The 'file_PlayWav(fname)' Open the wav file, decode the header to set the appropriate wave player parameters and set off the playing of the file as a background process. See “Sound Control Functions” in [PICASO or DIABLO16 Internal functions](#) for additional play control functions.

Add Magic Release

A Magic Release Object is added to Form0. This is **MagicRelease**.

A Magic Release object contains a 4DGL routine that is executed the moment that a “TOUCH_RELEASED” action is detected on the display.

```

8   snd_Stop() ;

```

The content of MagicRelease.inc is used to determine the object for which touch has just been released. If so then the sound playing will be stopped using 'snd_Stop()' function.

To know more about adding Magic Objects refer to the application note [ViSi-Genie How to Add Magic Objects](#)

Build and Upload the Project

For instructions on how to build and upload a ViSi-Genie project to the target display, please refer to the section “**Build and Upload the Project**” of the application note

[ViSi Genie Getting Started – First Project for Picaso Displays](#) (for Picaso)

or

[ViSi Genie Getting Started – First Project for Diablo16 Displays](#) (for Diablo16).

The uLCD-32PTU and/or the uLCD-35DT display modules are commonly used as examples, but the procedure is the same for other displays.
